(a) the exact ladder of critical floors
typed boundary $s = 2$ (Leontief, $\sigma \to 0$)
gap states falsely certified
by the σ-aggregator
rejected: the rung
exposes the breach
$\sqrt{3}$ $(\theta = -2)$
φ $(\theta = -1)$
$\sqrt{2}$ $(\theta = 0)$
5/4 $(\theta = 0.5)$
1 $(\theta = 1, \sigma = \infty)$
critical floor $s^*(\theta)$ on the diagonal (s, s)
elasticity of substitution $\sigma = 1/(1-\theta)$ (log scale)
(b) the critical elasticity along the diagonal
exact rational brackets (Table 4)
master-equation root $\sigma^*(s)$
$s = \sqrt{2}$: $\sigma^* = 1$
(geometric mean)
$\sigma^* \to \infty$ as $s \to 1^+$; $\sigma^* \to 0$ as $s \to 2^-$
critical elasticity $\sigma^*(s)$ (log scale)
diagonal gap state $(x < 1, s, s)$: floor margin s
